- [APU](#)

Flight Date:

Monday, May 2, 2011

Status:

Green

Replaced comms link to APU16 today. Also did some troubleshooting on APU14, which was not allowing external hard drive to mount. The problem is a bad disk image, but it is not affecting data collection and transmission. For the time being data will be stored on APU14's 1GB operating system drive, which has sufficient space to store 5 days of data. This problem with APU14 will be resolved on Friday when Matt W arrives.

All APUs are collecting data which is being uploaded to [trmm-fc server](#). Instrument status will be monitored remotely through Friday via the trmm server.
